Project overview

Verified

The Robin the Frog community takeover and the Pond.

Robin the Frog ($ROBIN) is a community meme token on Robinhood Chain. Volunteers organized a community takeover (CTO) to improve moderation, communication, and transparency.

The community maintains independent channels and creative projects. The CTO and original token deployer are separate. Community materials make no claim of sponsorship or endorsement by Robinhood.

Token supply & launch

Verified

Pons launch, verified supply reduction, and the deployer wallet burn.

Initial supply: 1,000,000,000 ROBIN. Pons lists the launch and graduation on 5 September 2026. The September graduation receipt at block 55,278,952 links the token to the ROBIN/USDG Uniswap v4 pool. The working paper estimates that about 20.4% initially seeded liquidity. A separate 81,632,653.0468 ROBIN transfer went to the Pons locker.

Supply and burn wallet: The launch transaction minted 1,000,000,000 ROBIN. At block 109,072,927 (8 November 2026 UTC), the token contract reported 992,491,223.611120620683247875 ROBIN. Two nonzero contract burns reconcile the full decrease of 7,508,776.388879379316752125 ROBIN. The 5 September burn removed 7,508,776.388878662044492319 ROBIN, and the 25 October burn removed 0.000000717272259806 ROBIN. At the same block, the burn wallet held 49,654,257.039059096058353082 ROBIN. That balance was still included in total supply.

≈942.8M ROBIN circulating · Nov 12, 2026

Circulating estimate = on-chain supply – burn wallet balance. This estimate includes the separate Pons-locked allocation.

992,491,223.611 – 49,654,257.039 ≈ 942,836,967 ROBIN

After graduation on 5 September, the original deployer wallet called the token's burn function and reduced its ROBIN balance to zero. The 25 October burn came from a different address. The verified contract lets any holder burn tokens from their own balance and contains no automatic burn schedule or developer-only burn function.

Liquidity & lock

Verified

Verified NFT custody, separate token allocation, and deployed locker permissions.

Revision 4 records the mint of Uniswap v4 position NFT #1927221 directly to the Pons locker at 0x267444D099b10fB5Ed7c3Cc7B7c767AdcA574952. It reports the locker as owner at blocks 109,072,927 and 109,892,240, with no NFT transfers or pool liquidity modifications found between those snapshots. The NFT position and the separate 81,632,653.0468 ROBIN allocation are distinct records.

- On-chain checks: NFT custody, graduation transfers, and deployed locker code verified on November 10, 2026.
- Pons reply: pending.
- Pons audit needs review. Check the Receipts

Verified on Robinhood Chain on 10 November 2026 (Pacific time). The Pons V2 locker owns Uniswap v4 position NFT #1927221 and records it as locked for ROBIN. The locker records a separate locked allocation of 81,632,653.046809400082549235 ROBIN, matching the graduation receipt. That receipt also records the NFT minted directly to the locker. The deployed runtime bytecode matches the Sourcify-verified source. The locker has no withdrawal, recovery, or upgrade function for either asset.

Burn wallet proof

Verified

Dated balance and the separate contract supply reading.

Revision 4 records 49,654,257.0391 ROBIN at 0x000000000000000000000000000000000000dEaD at block 109,072,927 (8 November 2026 UTC). Blockscout’s ROBIN holder page corroborates the address balance. A transfer to the burn wallet and a decrease in contract totalSupply are separate events.

MEXC wallet

Verified

Exchange confirmation and custody context.

MEXC Customer Service confirmed in writing that 0x2dBAf98620aC5Bbe3441f756fEfF82702D095b1a is a MEXC hot wallet on Robinhood Chain (chain ID 4663), corroborating Arkham's attribution. An exchange custody address can hold tokens for many customers. Balances vary over time.

Roadmap

Tentative

Completed milestones, ongoing work, planned releases, and pending requests.

Complete — Community Telegram. Volunteers opened a moderated Telegram group.

Complete — Launch and liquidity lock. The Studio documented the token launch and verified the locked Uniswap v4 position and separate ROBIN allocation.

Complete — Treasury approval setup. The Studio verified that the CTO Safe requires four of six approvals.

Complete — Lily Pad Show. The community released episodes, including Episode 2, shared on 10 November 2026 UTC.

Ongoing — Community moderation. Moderate Telegram and keep community links current.

Ongoing — Listings and profiles. Maintain directory listings and social profiles.

Ongoing — Treasury reporting. Document community treasury activity.

Planned — Creative releases. Develop more shorts, music, and games.

Pending — CoinMarketCap social links. The CTO requested an update to the listing with its current social links.

Pending — Pons creator-fee redirect. The CTO requested that future creator fees go to the community Safe. At the 10 November snapshot, a different recipient was still configured.

FAQs

Verified

Answers for readers and new contributors.

What is the CTO? A volunteer-led community takeover focused on moderation, outreach, and original creative work.

Where do I verify the token? Start with the Robinhood Chain Blockscout contract page and check the full address before interacting.

How can I help? Share original artwork, report impersonation to moderators, or contribute feedback. Admins never initiate private messages asking for funds or credentials.

What should readers consider? ROBIN is a speculative meme token. Prices, liquidity, and custody balances can change.

Community updates

Verified

Moderation, creative work, listings, and treasury follow-up.

The CTO reported opening a moderated Telegram group and developing documentary shorts, music, and a community game. It shared Episode 2 of the Lily Pad Show on 10 November 2026 UTC.

On 10 November 2026, CoinGecko listed the CTO website, robincoinrhcto.xyz. CoinMarketCap still listed therobincoin.xyz. The CTO team reported requesting that CoinMarketCap update the listing with its current social links. The request is pending.

At Robinhood Chain block 111,444,715 (10 November 2026 Pacific time), the CTO-identified treasury 0xe819a04f918d0e07fc1dbdb400618018ab2f70a5 reported Safe v1.5.0, six owners, a threshold of four approvals, and zero enabled modules.

The CTO reported applying to Pons for creator-fee redirection. At the same block, the Pons V2 factory listed 0x79df705a444d696295e72b2bf04193cd0f1bc930 as the configured ROBIN creator-fee recipient. The factory returned no pending recipient change. The configured recipient differs from the CTO Safe, so fee redirection to the Safe had not taken effect at that block.
