WHY $ROBIN IS THE Play

Original cover from Pythia’s article on X

The contract review

Pythia disclosed holding $ROBIN and described examining the token bytecode, transfer logs, wallet activity and trades. The article reported finding no owner function or controls to mint, pause transfers, blacklist wallets or change fees.

The risks Pythia flagged

Pythia estimated that bots drove about 46% of trading volume. The article put liquidity at about $92,000, down from $1.7 million a month earlier, and the top ten wallets’ share at 18.3%, up from 12%. It reported a price decline of roughly 73% from September highs.

Why Pythia stayed bullish

The article reported roughly 10,100 holders at both snapshots and described buyer and seller counts as fairly balanced. Pythia also pointed to the Robin name’s fit with Robinhood Chain and disclosed continuing to hold.

These figures and technical findings reflect Pythia’s assessment at publication. The Ribbit Paper has not independently reproduced them.
