

The Ribbit Paper

One Giant Leap for Meme-kind (rev5)

Full Paper - Robin the Frog Whitepaper
Edition 2026-11-10 | English edited 2026-11-22
PDF built 2026-11-22 from the published-page source.

Evidence dates are attached to individual records. An editorial refresh does not refresh historical balances or complete pending checks.

Project overview

Community reported

The Robin the Frog community takeover and the Pond.

Robin the Frog ($ROBIN) is a community meme token on Robinhood Chain. Volunteers organized a community takeover (CTO) to improve moderation, communication, and transparency.

The community maintains independent channels and creative projects. The CTO and original token deployer are separate. Community materials make no claim of sponsorship or endorsement by Robinhood.

Token supply & launch

On-chain checked

One billion ROBIN at launch. About 942.84 million in circulation in the November 12, 2026 snapshot.

ROBIN launched through Pons on September 5, 2026. It completed the launch curve that day and began trading in a ROBIN/USDG pool on Uniswap v4.

The supply at a glance

- **Minted at launch:** 1 billion ROBIN.
- **Total supply after contract burns:** about 992.49 million ROBIN.

- **Held in the burn wallet:** about 49.65 million ROBIN, excluded from the circulating estimate.
- **Estimated circulating supply:** about 942.84 million ROBIN.

How we calculate it: on-chain total supply minus the burn wallet balance. This is the paper's estimate as of November 12, 2026, not a live counter.

The separate **81.63 million ROBIN held in the Pons locker is included** in this circulating estimate. Locking tokens does not burn them. The liquidity position and this separate allocation are explained in the next section.

Exact figures and launch details

The September 5 graduation receipt at block 55,278,952 links ROBIN to the ROBIN/USDG Uniswap v4 pool. The working paper estimates that about 20.4% initially seeded liquidity. A separate 81,632,653.0468 ROBIN went to the Pons locker.

Supply and burn wallet: The launch transaction minted 1,000,000,000 ROBIN. At block 109,072,927 (8 November 2026 UTC), the token contract reported 992,491,223.611120620683247875 ROBIN. Two nonzero contract burns reconcile the full decrease of 7,508,776.388879379316752125 ROBIN. The 5 September burn removed 7,508,776.388878662044492319 ROBIN, and the 25 October burn removed 0.000000717272259806 ROBIN. At the same block, the burn wallet held 49,654,257.039059096058353082 ROBIN. That balance was still included in total supply.

The circulating estimate shown above is 992,491,223.611 − 49,654,257.039 ≈ 942,836,967 ROBIN, using the November 12 snapshot at block 112,684,348. The October 25 contract burn came from a different address from the original deployer.

Liquidity & lock

On-chain checked · audit pending

The Pons locker holds Robin's original trading position and a separate allocation of ROBIN. These are two different things.

What is locked?

• **The original trading position:** Uniswap v4 position NFT **#1927221** represents Robin's USDG/ROBIN liquidity. It was minted directly to the Pons locker at graduation.

• **A separate token allocation:** about **81.63 million ROBIN** was sent to the same locker. Those tokens are separate from the trading position.

What does the lock mean?

Under Pons's documented design, the original position cannot be withdrawn from the locker. **Trading can continue:** buyers and sellers change the mix of ROBIN and USDG in the position. A changing token balance does not, by itself, mean liquidity was unlocked.

The **Pool Manager at 0x8366…0951** holds assets for multiple positions. Its entire ROBIN balance should not be treated as the locked position's balance. The separate, withdrawable position **#1927218** is covered in the Dev Dump investigation.

What has been checked?

• **Custody:** Blockscout still listed the Pons locker as owner of #1927221 on November 21, 2026.

• **Liquidity units:** the paper's November 20 check found the original position's liquidity units matched graduation. This is a dated check, not a live guarantee.

• **Locker code:** the November 10 review found no withdrawal, asset-recovery or upgrade function for either asset.

Follow-up: Pons's direct reply is pending. The SB Security audit report, its match to the deployed contracts, and the resolution of findings remain unverified.

Read the Pool Manager receipts · Review the lock evidence

Exact figures and technical records

The locker is 0x267444D099b10fB5Ed7c3Cc7B7c767AdcA574952. The separate graduation allocation was 81,632,653.046809400082549235 ROBIN. Earlier custody records were checked at blocks 109,072,927 and 109,892,240, with no NFT transfers or pool liquidity modifications found between those snapshots. The later liquidity-unit comparison was checked through block 119,434,538 on November 20.

The November 10 review matched deployed locker runtime bytecode to Sourcify-verified source and found no withdrawal, recovery or upgrade function. NFT ownership and liquidity-unit checks are different checks; an NFT remaining in the locker alone does not prove that liquidity units are unchanged.

Burn wallet proof

On-chain snapshot

Dated balance and the separate contract supply reading.

Revision 4 records 49,654,257.0391 ROBIN at 0x000000000000000000000000000000000000dEaD at block 109,072,927 (8 November 2026 UTC). Blockscout's ROBIN holder page corroborates the address balance. A transfer to the burn wallet and a decrease in contract totalSupply are separate events.

Two different kinds of burn

A **contract burn** reduces the token's total supply. Sending tokens to the **burn wallet** leaves them in the contract's total supply, so we subtract that wallet's balance when estimating circulation.

After graduation, the original deployer burned the ROBIN remaining in its wallet, reducing that wallet's ROBIN balance to zero. Any holder can burn their own tokens; the contract has no automatic burn schedule or developer-only burn function.

MEXC wallet

Exchange confirmed

Exchange confirmation and custody context.

MEXC Customer Service confirmed in writing that 0x2dBAf98620aC5Bbe3441f756fEfF82702D095b1a is a MEXC hot wallet on Robinhood Chain (chain ID 4663), corroborating Arkham's attribution. An exchange custody address can hold tokens for many customers. Balances vary over time.

Roadmap

Progress record

What the Pond has completed, what volunteers keep building, and what is awaiting an outside response.

Completed

- Community Telegram and volunteer moderation channels.
- Launch and lock documentation, with dated evidence for the original trading position.
- Community treasury setup: four-of-six Safe approvals at the November 10 check.
- Lily Pad Show releases, including Episode 2 documented November 10.

Building

- Maintain community moderation, listings and public profiles.
- Publish treasury receipts and keep the Whitepaper’s sources current.
- Develop more shorts, music and games as volunteers contribute.
- Robin’s RWA Scout: follow the published research and documented payment pilot.

Awaiting

- **CoinMarketCap social links:** the community reported an update request. Latest recorded status: pending at the November 10 snapshot.
- **Pons creator fees:** redirection to the community Safe had not taken effect at block 111,444,715 on November 10. A later outcome needs a fresh check.
- **Audit documentation:** the Pons reply, SB Security report, deployed-contract coverage and finding resolutions remain outstanding in the paper’s record.

FAQs

Reader guidance

Answers for readers and new contributors.

What is the CTO? A volunteer-led community takeover focused on moderation, outreach, and original creative work.

Where do I verify the token? Start with the Robinhood Chain Blockscout contract page and check the full address before interacting.

How can I help? Share original artwork, report impersonation to moderators, or contribute feedback. Admins never initiate private messages asking for funds or credentials.

What should readers consider? ROBIN is a speculative meme token. Prices, liquidity, and custody balances can change.

Community updates

Community reports + dated checks

Moderation, creative work, listings, and treasury follow-up.

The CTO reported opening a moderated Telegram group and developing documentary shorts, music, and a community game. It shared Episode 2 of the Lily Pad Show on 10 November 2026 UTC.

On 10 November 2026, CoinGecko listed the CTO website, robincoinrhcto.xyz. CoinMarketCap still listed therobincoin.xyz. The CTO team reported requesting that CoinMarketCap update the listing with its current social links. The request is pending.

At Robinhood Chain block 111,444,715 (10 November 2026 Pacific time), the CTO-identified treasury 0xe819a04f918d0e07fc1dbdb400618018ab2f70a5 reported Safe v1.5.0, six owners, a threshold of four approvals, and zero enabled modules.

The CTO reported applying to Pons for creator-fee redirection. At the same block, the Pons V2 factory listed 0x79df705a444d696295e72b2bf04193cd0f1bc930 as the configured ROBIN creator-fee recipient. The factory returned no pending recipient change. The configured recipient differs from the CTO Safe, so fee redirection to the Safe had not taken effect at that block.
